

Figure 1. Acidity critical loads for the bog broad habitat based on:

(a) Dominant soil in each 1x1 km square

(b) assuming all bog habitat on peat soils

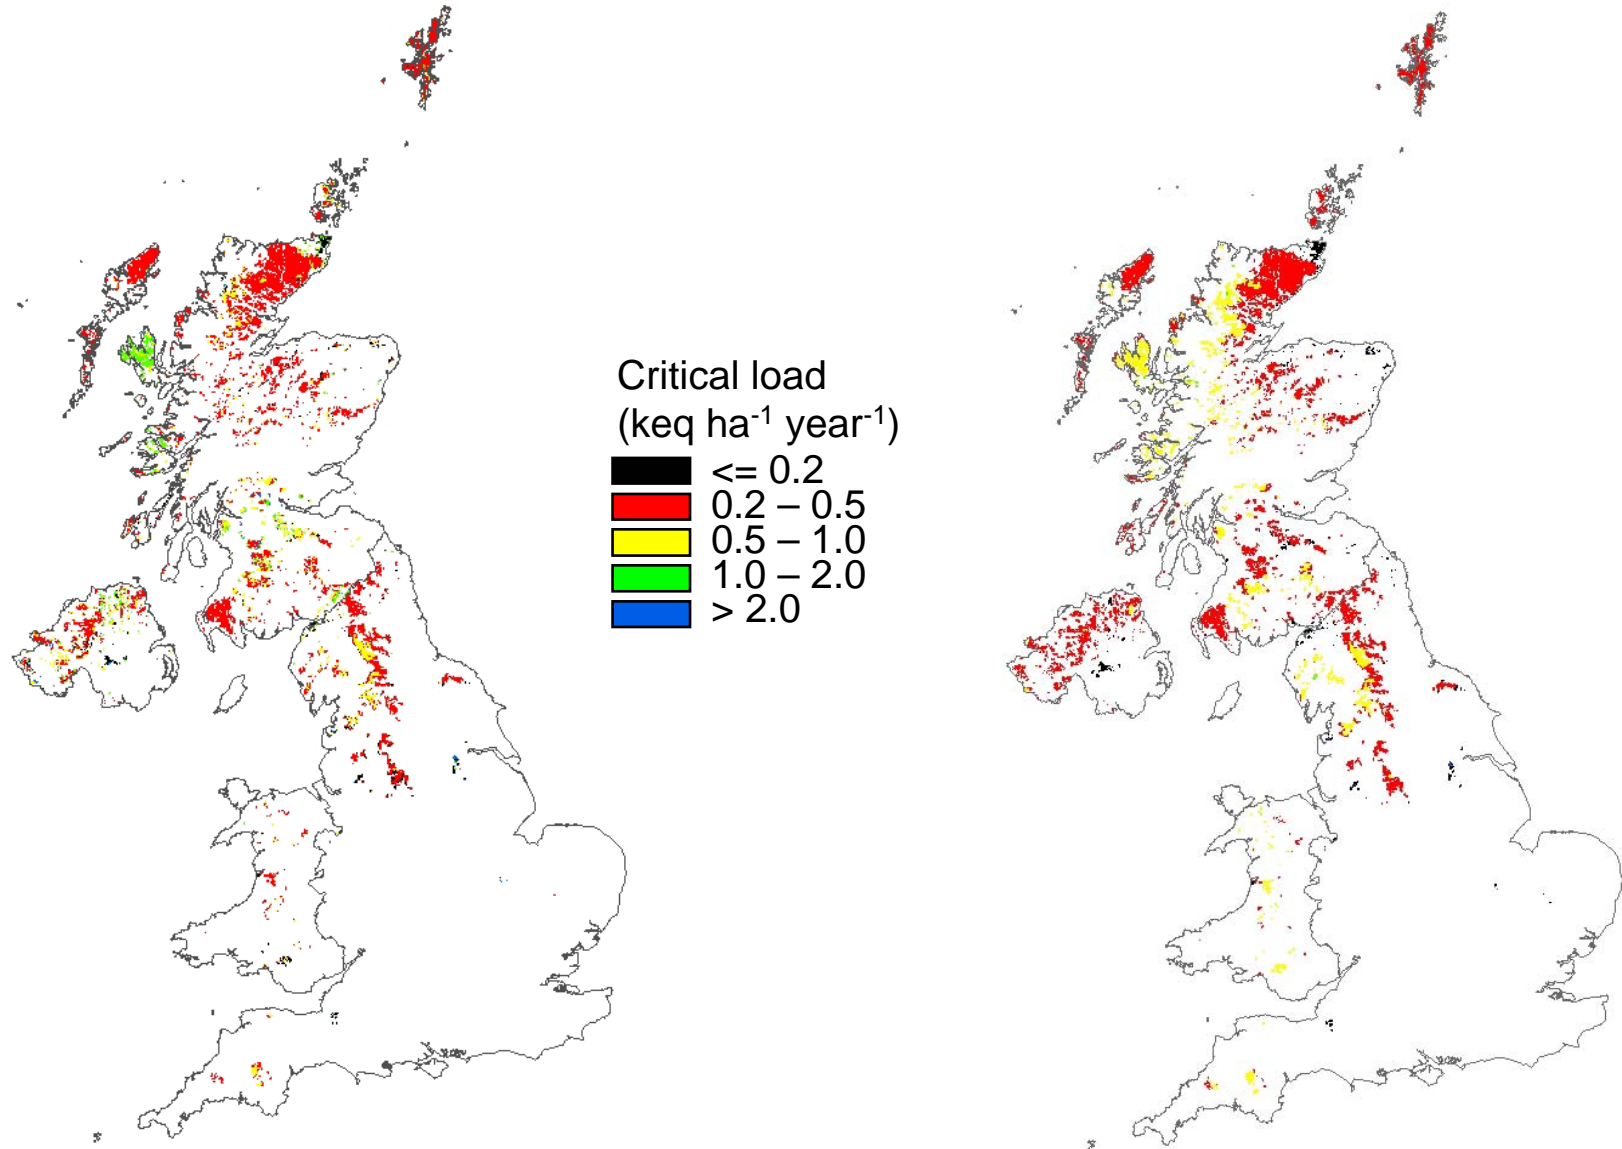

Figure 2. Exceedance of acidity critical loads for the bog broad habitat by acid deposition for 2004-06 and using critical loads based on:

(a) Dominant soil in each 1x1 km square

(b) assuming all bog habitat on peat soils

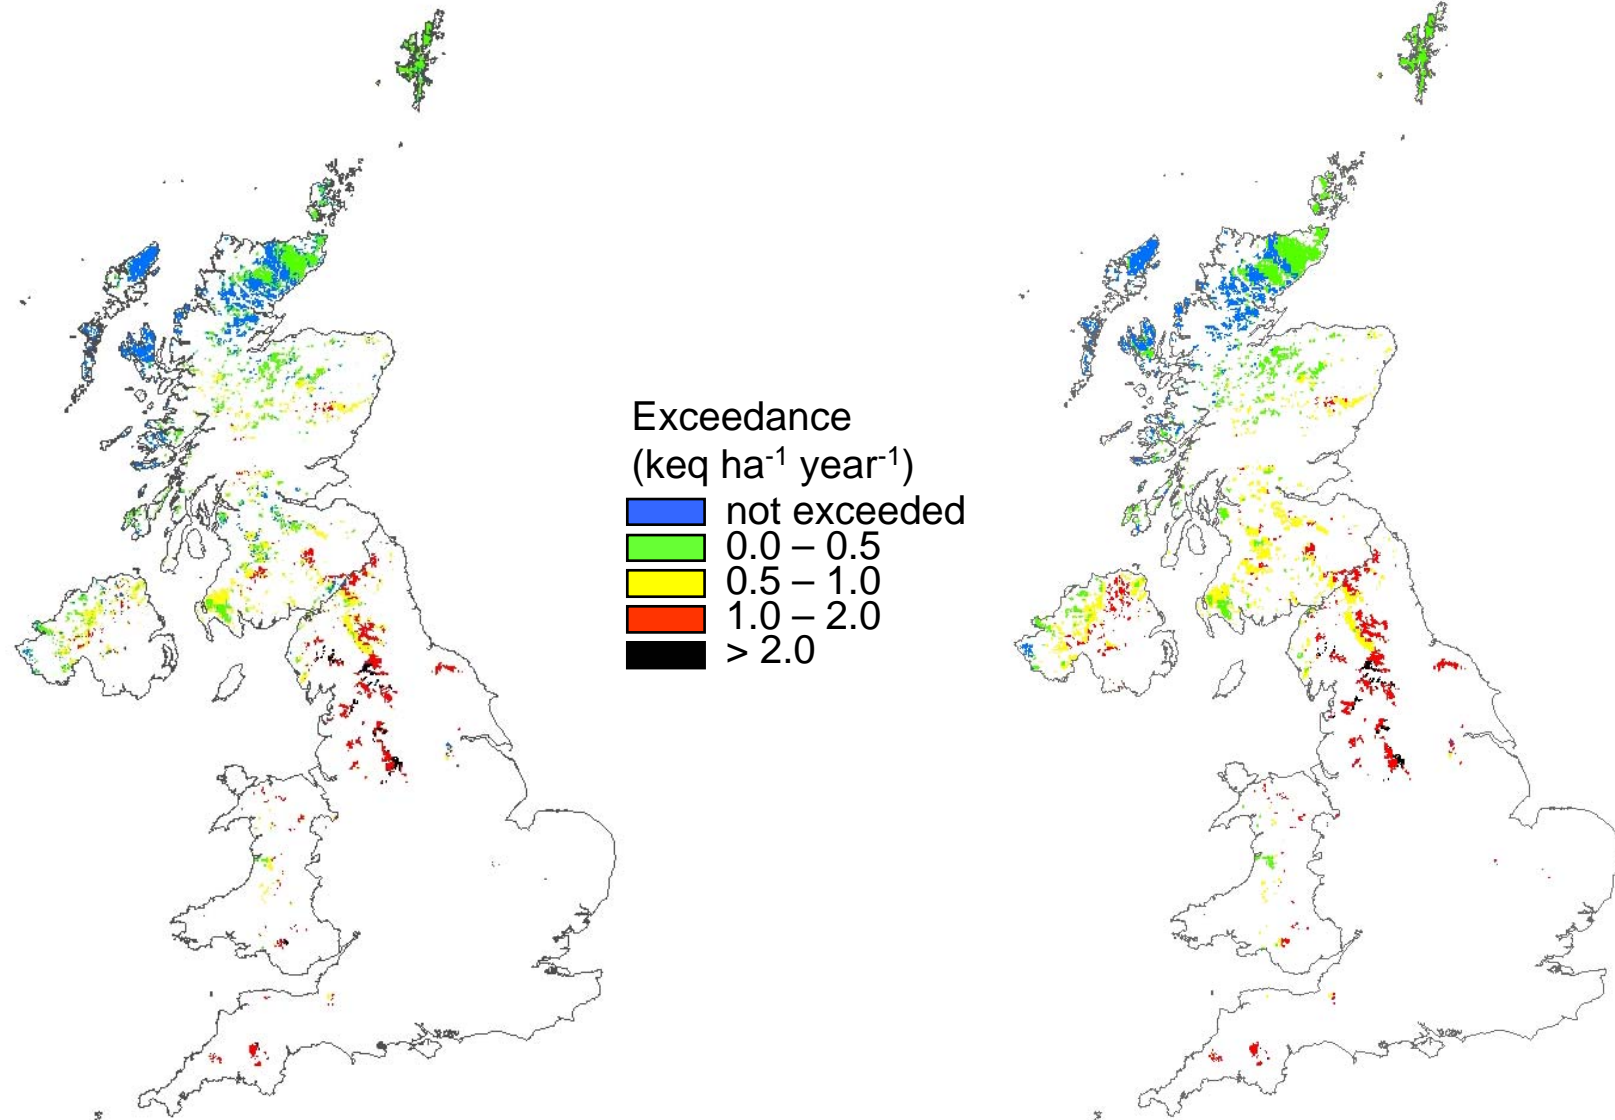

Figure 3. Exceedance of FAB critical loads by CBED 2004-06 acid deposition:

(a) Exceedance using area-weighted mean of average deposition

(b) Exceedance using area-weighted mean of habitat-specific deposition

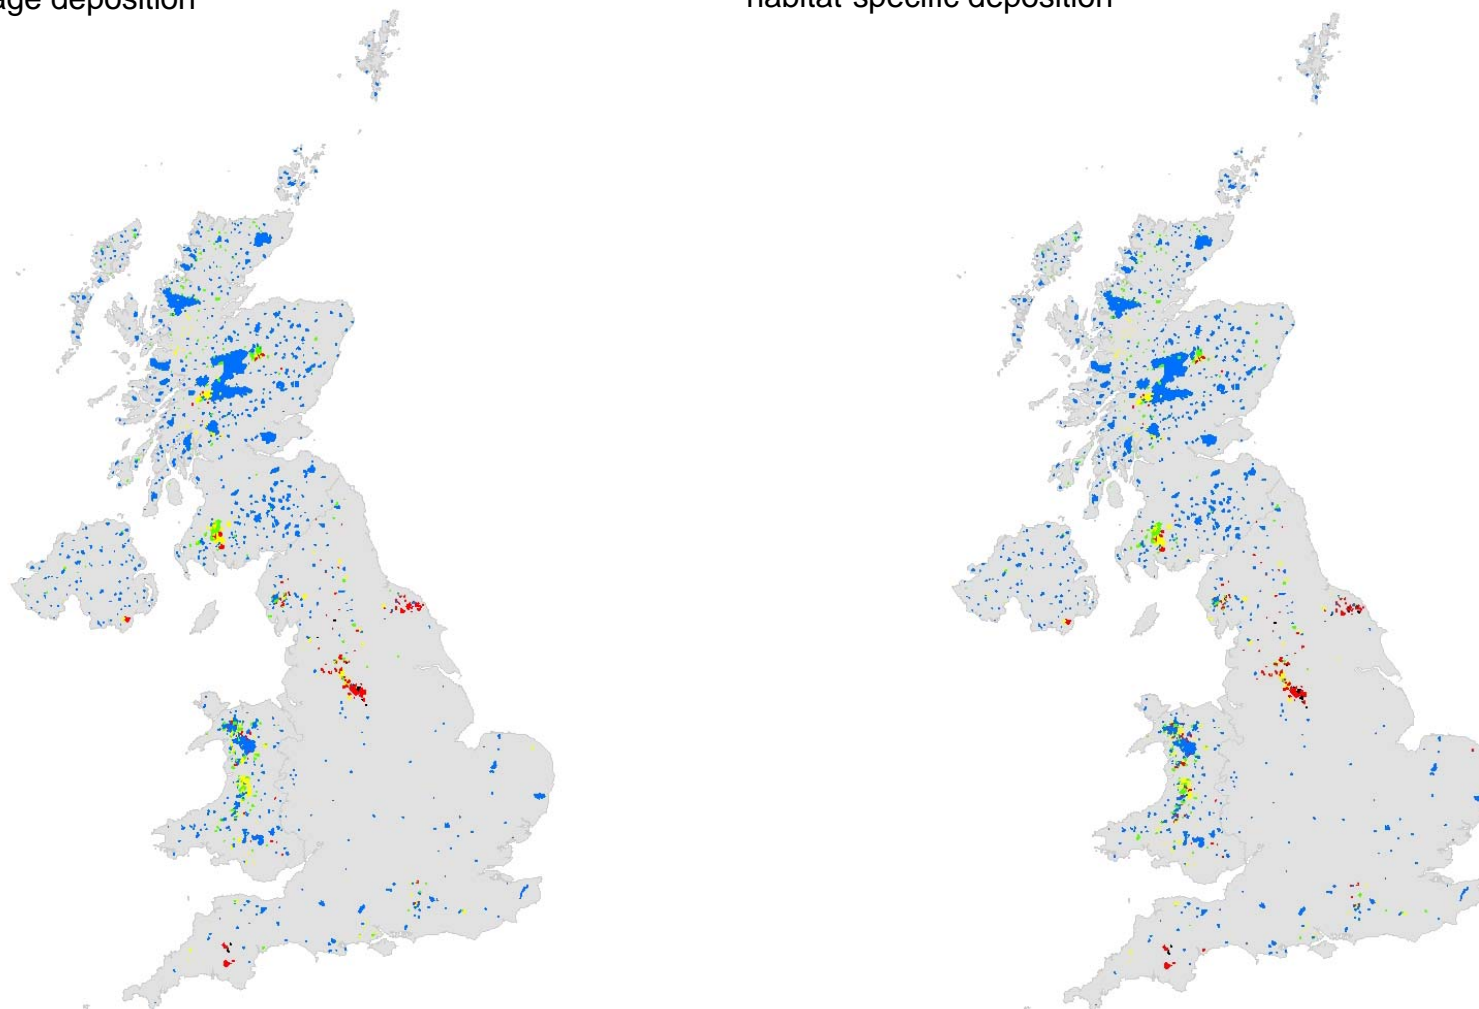

Figure 4. Exceedance of 5th-percentile acidity critical loads for terrestrial habitats by acid deposition for 2004-06 and incorporating critical loads for the bog broad habitat based on:

(a) Dominant soil in each 1x1 km square

(b) assuming all bog habitat on peat soils
